

THE TIMBER BLOCK ADVANTAGE

MIKE HOLMES INSPECTION PROGRAM

YOUR HOME BUILT RIGHT

Timber Block raises the industry quality bar again in announcing the Mike Holmes Inspection Program as an integral part of its manufacturing and building process.

Timber Block's partnership with the Mike Holmes Inspection Program will now provide every Timber Block home owner with two new quality assurance reports so they are more secure, better informed, and in greater control of their new home project.

3 INSPECTIONS TO MAKE IT RIGHT

Every new Timber Block home receives 3 detailed inspections completed by an Approved Mike Holmes Inspector during manufacturing and construction.

INSPECTION 1: FACTORY PRODUCT INSPECTION.

A Holmes Approved Homes Certificate of Conformity is sent to each client to certify that their Timber Block home was manufactured in compliance with Mike Holmes approved quality specifications.

INSPECTION 2: ON-SITE PRE-DRYWALL INSPECTION

Two on-site inspections are done by an Approved Mike Holmes Inspector prior to drywall installation. The first part focuses on confirmation that the structural framing and Timber Block products are in order.

- > Building Envelope
- > Exterior Trims
- > Structural Elements
- > Weather Proofing

INSPECTION 3: ON-SITE ENERGY EFFICIENCY INSPECTION

The second on-site inspection focuses on validating the energy efficiency of the house.

- > Insulation & vapour barrier
- > Sealing of the building envelope
- > Window installation
- > Blower door test

After the site visit, inspection reports will be provided to every client and the Project Manager will review the findings with the client and their General Contractor.

Timber Block home owners can take comfort in having two professional 3rd party field inspections performed on their homes during this critical construction phase.
